

## Oliver Crowe – Jammer Classic Wish Child 2011

Oliver was diagnosed with Medulloblastoma. Medulloblastoma is a type of brain tumor. A brain tumor begins when normal cells in the brain change and grow uncontrollably, forming a mass. The brain and spinal column make up the central nervous system (CNS), where all vital functions are controlled, including thought, speech, and body strength. Medulloblastoma begins in granular cells in the cerebellum (back of the brain). This is the part of the brain that controls body movement and coordination.

Oliver is doing great! The family are awaiting his MRI results. Then will not need one for another six months. Oliver and his family went to Jamaica a few years ago for Oliver's wish and had a fabulous time!
